

# *Joomla Assignment Report*

Name: K.K.A.Sandaruwan

Index No: 17001552

## **1. Introduction**

First I downloaded joomla package, then put it in the xampp --> htdocs directory. Then I run the apache server on my machine and copied the path of the joomla folder and paste it on the browser and tried to install joomla but I encounter some problems while installing them. There were three stages to complete and I completed all three but it was taking a whole lot time to install. Then I did all the stages from the start and the same problem appeared. That was the time I decided to watch some youtube videos and I act according to those videos. I change some configuration.php files and then it worked.

## **2. Add a template**

I downloaded and installed some templates and those are not good enough to me. So I stayed with Beez3. And after adding some contents I tried to switch from Beez3 to some other template and all the contents were disappear. This was also a reason why I stayed with Beez3 template.

## **3. Add Contents**

First I created some categories. And then I created some articles with all the requirement filled in.eg:-Which article belongs to which category. Then I clicked on menu tab and created a menu and included the articles into those menus. After that I clicked on the modules and created new modules and added those menus to the modules and gave the positions that where I want them to display.

#### **4. Add Extensions**

There were some extensions mentioned in the tutorial. I installed those to my site. And I encountered some problems when trying to installing them. Like ksecure extension was not available to download for some reasons. And some of them are very hard to install the system want take them. But after several attempts I manage to install them.

#### **5. Add Virtuemart**

Also I downloaded virtuemart to the site. And then linked the virtuemart front page with the module call items in virtuemart. Then added a shopping cart to the site. Created some Product Categories and subCategories and added products into those. And also I connected the virtuemart with paypal online payment method.

#### **6. Play a Video**

In my site there is a video link under phone menu. I added a youtube video there after installing.

#### **7. BT Login**

Also installed but login to and enabled it in the site. Through that now others can register into my site. And also when they are registering there is a captcha to fill in login will redirect the user to the about us page.

#### **8. Hosting the site**

First I downloaded a backup of my site and database using Akeeba backup extension. Then I registered to the CloudAccess site. I uploaded my backup file and kickstart.php file to the CloudeAccesses httpdocs folder. And did necessary actions and finally enable to host my site.

## 9. Screen Shots

Screen shots are adding 4 , 5 & 6 pages.

## 10. Resources Used

Tutorial Guide

You Tube

Internet

And also gained some help from **friends**.

## Welcome To Business Web

On your homepage, you need to make it obvious to your homepage visitors:-

What your website offers them

What they can find and achieve on your website.

You can achieve this in a number of ways:-

If it is not immediately obvious to your visitors what your website is about, you are going to need to write a welcome message which makes the purpose of your website clear.

If your website is simple, it may not be necessary to write a welcome message. You may be able to display some sample previews of your content which, in combination with your menu, will make it obvious to your visitors what they can find on your website.

The modern trend is towards the second option – with no formal welcome message or statement of purpose. However, when a site is complex, it becomes essential to explain to your users, *in as few simple words as possible*, what they can find on your site and how they can get started.

The key to writing a good welcome message is to make it focused around your users' wants and needs, and make it extremely simple.

Before you read further, a good starting point can be to read [four simple homepage tips](#).

### Why Our Clients Like Us

We don't use freelance sub-contractors like many other video production companies routinely do. Every member of our award-winning crew is a full-time employee and has worked with fellow crew members an average of four years. Meet our crew.
